

TODAY WE TREATED FOR TICKS

Today, I made an application to the lawn and border of your property to help control ticks. With one application in the spring, studies have shown tick populations can be reduced 85 to 90%.

Here are a few tick prevention tips:

Wear light-colored clothing with long pants tucked into socks.

Carefully inspect your entire body after being outdoors, tick bites are painless and hard to detect.

Stay clear of brushy area, ticks don't jump or fly but grasp passing hosts.

Use a DEET based tick repellent.

Seek medical help if a tick has attached itself.

While 1 application controls most ticks, some customers have asked for follow up treatment. If you are interested in additional tick control, let us know.
